

2026 Arista CloudVision

Network Hierarchy & Guided Workflows in CloudVision
Provisioning, Monitoring, and Managing Campus Networks

Agenda

- Overview of Network Hierarchy
 - *Shifting gears*
- Purpose & Key Benefits
- Where Configuration Data Is Stored
- Correlation with Studios
- Guided Workflows — Purpose & Mechanics
- Under the Hood - Beyond just config storage in Studios
- Day-0 Through Day-N: Initial & Post-Deployment Use
- SCS Applicability (Current Status)

What Is Network Hierarchy?

1. So you just deployed Campus A the “Hard Way” - Is there something easier?
2. Network Hierarchy is a unified, topology-driven platform inside CloudVision for provisioning, monitoring, and managing campus networks.
3. Provides a hierarchical, visual representation of the campus:
 - a. Network → Campus → Campus Pod → Spine → Access Pod
4. Aggregates metrics and telemetry across distinct network layers
5. Enables drill-down from network-wide state to individual interfaces

Purpose of Network Hierarchy

Capability	Description
Day-0 Provisioning	Guided workflow walks you through campus creation, DNS, NTP, AAA, device assignment
Day-1 Configuration	Add spines, access pods, assign roles, apply campus-wide settings
Day-2 Operations	Monitor health, endpoints, utilization; upgrade software; add devices via Quick Actions
Unified View	Single pane of glass for provisioning AND monitoring — no context switching

Network Hierarchy abstracts the complexity of Arista Validated Designs (AVD) behind an intuitive UI.

What is the most important aspects of a network management tool?

Network Hierarchy modifications workflow

#1 - Network Hierarchy

Add/Update an option in Network H.

#2 - Workspace

Create an intention to change
- Choose to save or not

#3 - Studios

Modify the configuration
datastore

#4 - Change Control

Commit the changes to
devices

End-to-End Configuration and Software Management

Where Is NH Configuration Stored?

Configuration and Software Management

Key Features → Benefits

- **Studios provide** → The ability to instantly spin-up Arista Validated Network Designs
- **Basis for backend configuration mgmt** → Network Hierarchy configuration is stored here. Higher-resolution options
- **Network-wide Data models** → Abstractions for simpler automation of network-wide changes

Bringing Agility to Network Config Management

Network Hierarchy configuration <> Studios backend

- Studios remain independently accessible for advanced users or non-campus use cases
- If a Studio is edited directly, a "Sync Hierarchy" banner appears — click Sync to reconcile

Guided Workflows: Overview

Goal: Make network configuration more intuitive

- Guided Workflows are step-by-step configuration wizards embedded in Network Hierarchy that walk users through Campus Provisioning.

Feature

Creation of a new Campus / Campus Pod / Access Pod

Modification

What It Does

Tracks high-level progress across the entire campus, one step at a time — shows which layers are configured and what's next - Sequential steps

Network Hierarchy can be used at any time to modify anything. This is not a one-use wizard

Guided Workflow: Campus Deployment Steps

1. **Add Campus** — Name, DNS profile, NTP servers
 - **Configure Local Users** — Roles and access levels
 - **Configure AAA** — RADIUS/TACACS+ servers, authentication profiles
 - **Configure Streaming Agent** — TerminAttr proxy, DHCP collector
2. **Add Campus Pod** — Select design (L2/L3/EVPN), routing protocols, IP pools
3. **Configure Spine** — Assign devices, software, egress connectivity
4. **Add Access Pods** — Assign leaf/member-leaf devices, MLAG pairs, in-band management
5. **Review & Submit Workspace** — Validate → Change Control → Deploy

Each step auto-creates a workspace. Submit when ready.

Under the Hood - Beyond just config storage

When you fill in a Network Hierarchy form:

1. **Tags are created/assigned** — Devices get tags based on role and position in the hierarchy
2. **Studio inputs are populated** — Structured data written into Campus Fabric, Management Connectivity Studios, etc.
3. **Configuration is compiled** — CloudVision compiles device-level EOS configuration from Studio inputs
4. **Validation runs automatically** — Pre-deployment checks catch errors before anything reaches a device
5. **Workspace captures the delta** — All changes recorded as a discrete, reviewable unit
6. **Change Control executes** — Approved changes push config and software to devices via TerminAttr

The entire pipeline is intent-based: you define what you want, CloudVision generates and validates.

Day-0 and Post-Deployment Use

Phase	Network Hierarchy Capability
Day-0: Initial Build	Full guided workflow — campus creation through access pod deployment
Day-1: Expansion	Add Campus Pod, Add Access Pod, Add Device quick actions
Day-2: Operations	Monitor health, endpoints, utilization; run interface diagnostics
Fabric Modifications	Change routing protocols, add external devices, modify IP pools — all through the same UI
Software Upgrades	Upgrade Device quick action — select software, review devices, schedule or execute
Device Replacement	Swap devices via Inventory — config and software automatically reassigned

Network Hierarchy is not a one-time setup tool — it is the ongoing operational interface for your campus fabric.

Quick Actions: Streamlined Day-2

Quick Actions provide single-click workflows without navigating the full configuration flow:

- **Add Device** — Select deployment type → assign to campus pod/access pod → assign software and roles → submit to Change Control
- **Upgrade Device** — Select software → review devices → choose upgrade method → schedule or execute immediately
- Post-upgrade comparison tab validates pre- vs. post-upgrade metrics

The screenshot displays the 'Upgrade Campus Devices' workflow in a web interface. At the top, a list of device types is shown: vEOS, Spine, vEOS, vExternal, vIDF-1, vIDF-2, vIDF-3, and vIDF-4. A red box highlights the vIDF-2 entry, and a context menu is open next to it, showing options: 'Add Device', 'Upgrade' (highlighted with a red box), and 'Delete'. Below this, the 'Upgrade Campus Devices' section includes a note about MLAG devices, a 'Workspace' selection dropdown, and a 'Software Assignment' table with columns for Image, Streaming Agent, and Extensions. The 'Devices' section shows 'Upgrading (2)' and 'Unavailable (0)'. A table lists the devices being upgraded: LF2 and LF3, both with the current image 'vEOS-lab-4.35.5M.swi' and model 'vEOS-lab'. A diagram at the bottom shows two vEOS devices, LF2 and LF3, connected by a line.

Upgrade Campus Devices

MLAG devices upgrade one by one, while other devices upgrade in parallel.

Workspace
Select an existing workspace or leave blank to create a new one. Only workspaces created from this upgrade workflow are shown.

Workspace
Select a workspace

Software Assignment + Add Software

Image	Streaming Agent	Extensions
Select	Select	Select

Devices
Upgrading (2) Unavailable (0)

The listed devices will be upgraded with the software assignments.

Device Name	Current Image	Model
LF2	vEOS-lab-4.35.5M.swi	vEOS-lab
LF3	vEOS-lab-4.35.5M.swi	vEOS-lab

Showing 2 Items

Diagram: Two vEOS devices (LF2 and LF3) connected by a line.

Static Configuration in Network Hierarchy!

- Status: **Just arrived!**
- The Supplemental Configuration System (SCS) now integrates with Network Hierarchy or the Studios-based provisioning pipeline.
- If we don't yet have a feature in the UI, no worries! Put the command(s) in the Static Configuration section in Network Hierarchy.

Summary - It just makes sense!

- **Network Hierarchy:** Make network configuration more intuitive!
- **Guided Workflows:** step-by-step wizards that reduce complexity and errors
- **Day 0-2!** Works for initial deployment AND ongoing fabric modifications
 - Quick Actions streamline common Day-2 tasks
- **All backed:** by automated validation and intent-based configuration

The background of the slide features a light blue gradient with a subtle grid pattern. Overlaid on this are two complex network diagrams. One network, composed of thin grey lines and small dots, is located in the upper right quadrant. Another network, made of slightly thicker blue lines and dots, is positioned in the lower right quadrant. The Arista logo is placed in the top left corner.

ARISTA

Thank you!
